

Lewis and Clark Exposition

By Carl Abbott

Portland staged its first and only world's fair from June 1 through October 15, 1905. During those four and a half months, 1,588,000 paying visitors passed through the gates to the 400-acre fairgrounds on the northwest edge of town. More than 400,000 were from outside the Pacific Northwest, a huge number of tourists for a city of perhaps 120,000 people.

Two years of landscaping had turned Guild's Lake, a marshy slough surrounded by dairies and truck farms, into building sites and terraces that led to a sparkling lake kept fresh with a constant flow of water pumped from the Willamette River. The exhibition halls went up on the bluff overlooking Guild's Lake and on a peninsula accessed by the Bridge of Nations. The whitewashed buildings against the green hills, said Mayor George H. Williams, was like "a diamond set in a coronet of emeralds."

The Lewis and Clark Exposition was conceived so Portland could demonstrate that it could mount a major civic enterprise. The city had had a solid record of economic growth since its founding in 1845, but at the turn of the twentieth century it was competing for investment and immigration with dozens of other cities throughout the American West—nearby Seattle, Spokane, Tacoma, Bellingham, and Everett and with more distant places such as Denver, Oakland, and San Diego. A successful world's fair would enhance the city's reputation as a safe and sound place to do business.

Portlanders also had another incentive. The fair event came only a year after St. Louis had hosted the enormously successful Louisiana Purchase Exposition. St. Louis was one of the most important cities in the country, and organizers believed that a fair that held its own with the Missouri metropolis would do wonders for Portland's reputation.

The exposition was expected to boost to the regional economy. Visitors would spend money on train tickets, hotel rooms, food, and drink, and the Northern Pacific Railroad and brewer Henry Weinhard were among the biggest financial backers. They would also learn about the natural resources of the Northwest and recognize how close Portland was to the markets of East Asia, which were attracting attention after the recent U.S. acquisitions of Hawaii and the Philippines. Although few people ever used it, the official name was Lewis and Clark Centennial and American Pacific Exposition and Oriental Fair.

Like all of the other expositions during a century of world's fairs—from the Crystal Palace Exhibition in London in 1851 to the New York and San Francisco world's fairs of 1939-1940—the Lewis and Clark Exposition was a showcase for progress and people visited world's fairs to learn about scientific and technological advances. In Portland, they could take in moving picture shows, watch motorized blimps maneuver in the sky, cheer the winner of the first transcontinental auto race, and marvel at the power of electric lighting.

The social progress demonstrated by the fair was more complex. A racist exhibit of Filipino "savages" along the fair's amusement trail contrasted with the forward-looking speeches at the American Woman Suffrage Association convention. The official program for Portland Day showed a lone Indian looking down from the hills at the fairgrounds, a reminder of the power of European Americans.

Visitors to the exhibition pavilions saw the themes of prosperity and progress in multiple variations. The Oriental Exhibits and Foreign Exhibits pavilions highlighted the possibilities of foreign trade, and Japan's million-dollar exhibit was the largest among the twenty-one participating nations. The Palace of Agriculture showed the bounty of the western land. In the Oregon Building, counties showed off grain, fruit, canned goods, minerals, and myrtle wood furniture. The towering Forestry Building, a "log cathedral" made from huge unpeeled Douglas-fir trunks, testified to the potential of the Northwest lumber industry. Separate buildings for Manufacturing and for Electricity, Machinery, and Transportation displayed the latest products of technical ingenuity.

The U.S. Government Building summarized the themes of prosperity and progress. A working model of the new Palouse irrigation project in eastern Washington, a relief model of the Klamath

Basin reclamation project in southern Oregon, and a fish hatchery demonstrated how engineering and science could enhance regional growth. Panoramas of the Grand Canyon and Yellowstone Falls looked forward to the expansion of western tourism. Naval displays were a reminder that the United States had become a Pacific military power.

Portland's leaders hoped that the Lewis and Clark Exposition would garner reams of favorable publicity. When they emblazoned "Westward the Course of Empire Takes Its Way" on the arch over the entrance gate, they anticipated that visitors would see that empire was making its way westward to Oregon. And it was a success. Journalists from the East Coast called the Exposition "Portland's pride" and commented that "the whole fair is a successful effort to express . . . the natural richness of the country and its relative nearness to Asia."
